The laboratory grown diamond described in this Report (Report) has been graded, tested, analyzed, examined and/or inscribed by International Gemological Institute (I.G.I.). A laboratory grown diamond is one that has essentially the same chemical, physical and optical properties as a natural diamond. I.G.I. employs and utilizes those techniques and equipment currently available to I.G.I., including, without limitation, 10X magnification, corrected line type, binocular microscope, master color comparison stones, non-contact, computerized refractometer, spectrometer, and/or other equipment and/or such other instruments and/or processes as deemed appropriate by I.G.I. This Report includes advised security features. A duly accredited gemologist or jeweler can advise you with regard to the importance of and interrelationship between cut, color, clarity and carat weight.
