The laboratory grown diamond described in this Report ("Report") has been graded, tested, analyzed, examined and/or inscribed by International Gemological Institute ("IGI") using the most advanced scientific and technological methods available. IGI's optical and physical properties are a natural diamond, with the exception of being grown by man (a manufactured product). IGI employs and utilizes those techniques and equipment, including but not limited to, 10X magnification, corrected triplet loupe, binocular microscope, master color comparison stones, non-contact optical measuring device, Diamond Sure™, Diamond View™, Spectrophotometer and such other instruments and/or processes as may be necessary to ensure the highest quality and most advanced security features. A duly accredited gemologist or jeweler can advise you with respect to the importance of and interrelationship between cut, color, clarity and carat weight.
