The laboratory growth diamond described in this Report (Report) has been graded, tested, analyzed, examined and/or inscribed by International Gemological Institute (I.G.I.). A laboratory grown diamond is one that has essentially the same chemical, physical and optical properties as a natural diamond. I.G.I. uses the same chemical, physical and optical testing procedures as those used by the Gemological Institute of America (G.I.A.) to grade diamonds. I.G.I. employs and utilizes those techniques and equipment currently available to I.G.I., including, without limitation, 10x magnification, corrected triplet loupe, binocular microscope, master color comparison stones, non-contact optical refractive index measurement, ultraviolet fluorescence, and other testing equipment, instruments and/or processes as deemed appropriate by I.G.I. This Report includes advanced security features. A duly accredited gemologist or jeweler can advise you with respect to the importance of and interrelationship between cut, color, clarity and carat weight.

THIS REPORT IS NEITHER A GUARANTEE, VALUATION, NOR APPRAISAL OF THE GEMSTONE DESCRIBED HEREIN. PLEASE REVIEW THE LIMITATIONS AND RESTRICTIONS SET FORTH ONLINE. FOR A COMPLETE LIST OF LIMITATIONS AND DISCLAIMERS, PLEASE GO TO WWW.IGI.ORG OR CALL 1-888-BUY-IGI.
