This Laboratory Grown diamond (LGD) described in this Report has been analyzed, graded and Laserinscribed® by International Gemological Institute (IGI). A LGD has essentially the chemical, physical and optical properties as a mined diamond, with the exception of being man-made (a manufactured product). LGDs are usually produced from a seed crystal deposited by CVD or HPHT processes (high pressure, high temperature) growth processes and may include post growth treatments to change their color utilization. The most advanced techniques and equipment currently available including, binocular microscopes, diamond color masters, non-contact-optical measuring device, a wide range analytical techniques including FTIR, UV-Vis-NIR, Raman spectroscopy, and fluorescence analysis at various excitations are used to identify and grade diamonds. IGI's grading system is based on scientific methods, valuation not arbitrary and by making the report it does not agree to purchase or replace the article.
