The left diagram shows a circle with an inscribed square. The square's vertices are labeled 'a' (bottom), 'b' (right), 'c' (top), and 'd' (left). Diagonals are drawn, and lines connect the vertices of the square to the midpoints of the opposite sides of the square, creating a 16-sided polygon (heptadecagon) inscribed in the circle.

The right diagram shows the same circle with the 16-sided polygon (heptadecagon) inscribed. The polygon is formed by connecting the vertices of the square to the midpoints of the opposite sides of the square, creating a 16-sided polygon (heptadecagon) inscribed in the circle.

Red symbols indicate internal characteristics.
Green symbols indicate external characteristics.
